

DRINKING WATER SOLUTIONS

FOR SCHOOLS

Your Partner in Cool.

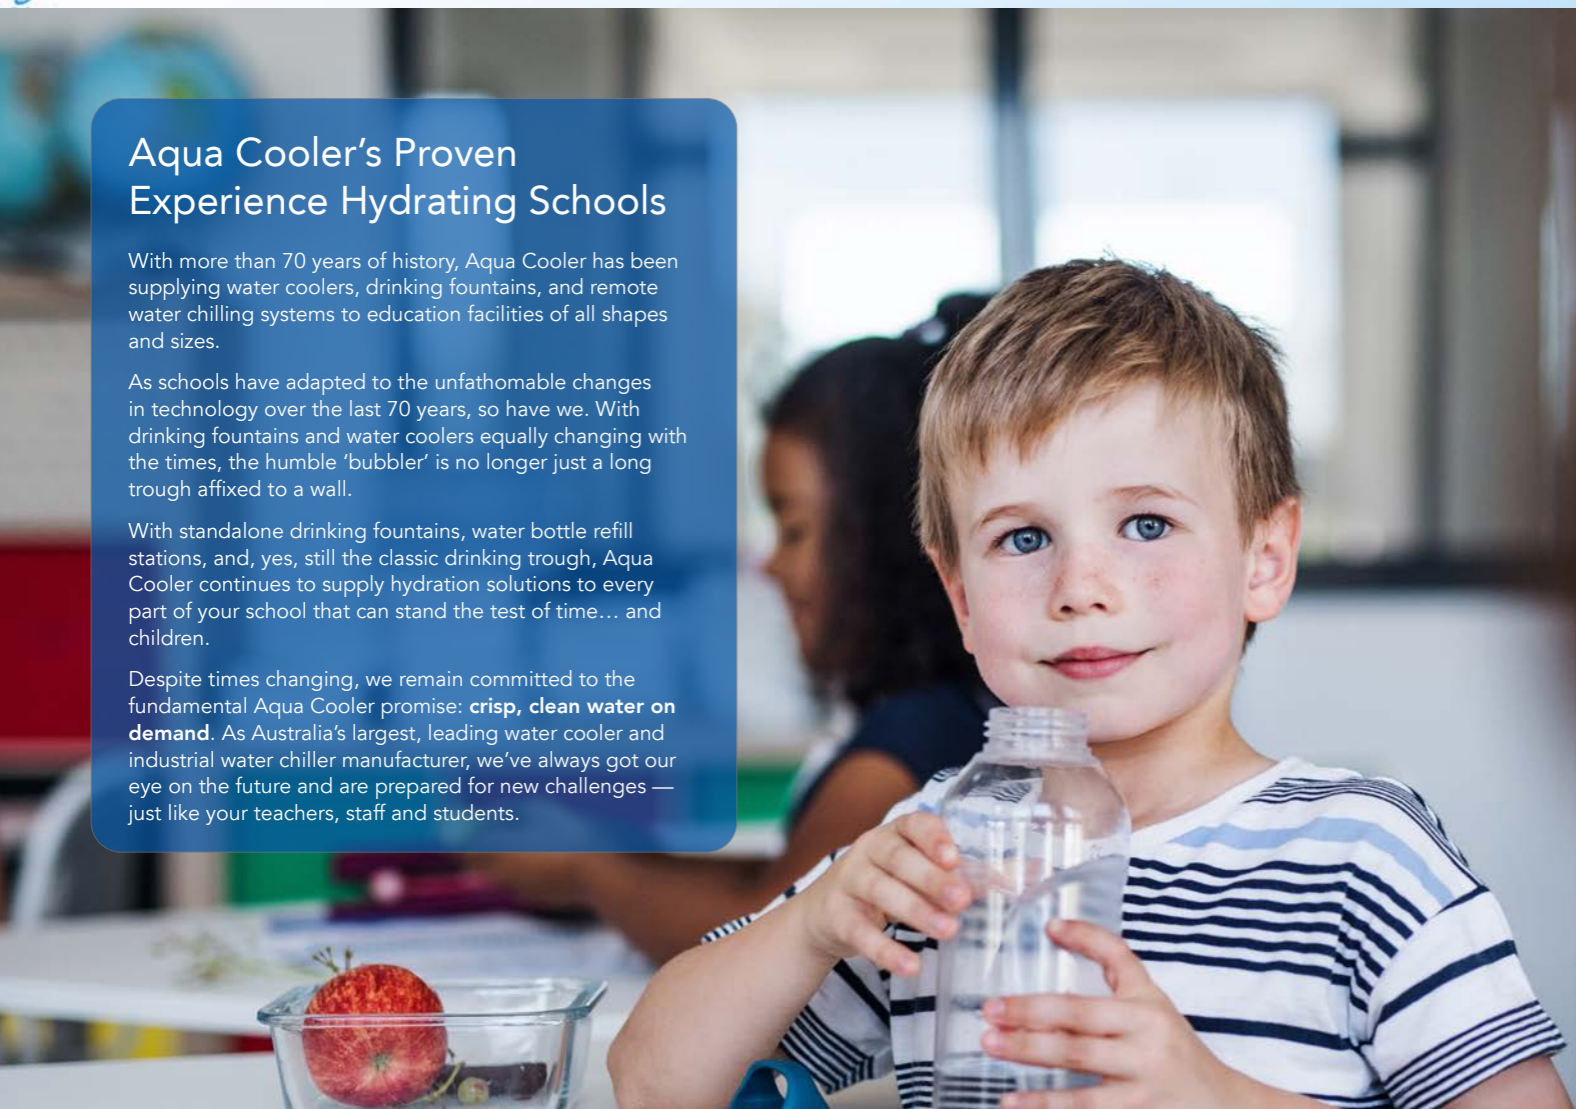

Aqua Cooler's Proven Experience Hydrating Schools

With more than 70 years of history, Aqua Cooler has been supplying water coolers, drinking fountains, and remote water chilling systems to education facilities of all shapes and sizes.

As schools have adapted to the unfathomable changes in technology over the last 70 years, so have we. With drinking fountains and water coolers equally changing with the times, the humble 'bubbler' is no longer just a long trough affixed to a wall.

With standalone drinking fountains, water bottle refill stations, and, yes, still the classic drinking trough, Aqua Cooler continues to supply hydration solutions to every part of your school that can stand the test of time... and children.

Despite times changing, we remain committed to the fundamental Aqua Cooler promise: **crisp, clean water on demand**. As Australia's largest, leading water cooler and industrial water chiller manufacturer, we've always got our eye on the future and are prepared for new challenges — just like your teachers, staff and students.

About us

Aqua Cooler is a proudly Australian-owned and operated drinking water solution company based in Brisbane, Queensland. Our experienced and committed team of technicians, sales and support staff service the Australian and New Zealand drinking water industry.

You can rely on 70 years of industry knowledge when you purchase from Aqua Cooler, and no other Australian brand can compare to our quality, attention to detail, and fit-for-purpose product range. Trust in the highest quality materials, created by the most knowledgeable and experienced team in the industry.

Aqua Cooler supplies an extensive range of water coolers, drinking fountains, under-bench and remote water systems and related parts and accessories for schools, homes, offices, gyms, worksites and more.

It is essential that your students have access to safe, clean drinking water.

Studies have shown that dehydration is a leading cause of fatigue and directly impacts students' mood and cognitive behaviour. As a school, keeping your students well-hydrated means they are more focused, suffer from less fatigue and have the potential to get more done in the classroom.

When it comes to providing a drinking water solution for your students, you can rest assured that Aqua Cooler has the experience you can count on.

We offer excellent product selection advice and class leading customer support, all backed by our first-rate after sales service.

Aqua Cooler offers solutions in the following categories:

- Drinking fountains, both refrigerated and ambient.
- Chilled bubbler and bottle fillers with auto-sense technology.
- Water coolers, with options that connect to your mains plumbing as well as models suitable for replaceable spring water bottles.
- Drinking troughs with various combinations of bubblers and bottle fillers.
- Remote water chilling systems that can connect to your existing ambient solution
- Underbench chillers for your staff room kitchen.
- Various filtration products to suit your requirements.

Bubblers and Bottles Fillers

VersaFiller Series

The **VersaFiller** range includes a wall mounted basin with integrated bottle filler, giving your students the ability to access water through a bubbler and also fill their water bottles up from the one unit.

The VersaFiller series features models with a wide range of configurations, including hand-free dispensing, UV filtration and split height basins.

Each of these systems harness the natural bacteria-fighting power of silver by infusing it into a poly compound on molded parts of the alcoves.

- Refrigerated / Ambient models
- Filtration options including standard, or Quasar UV
- Contactless hands-free dispensing options for basin and bottle filler.

Surface mounted bottle fillers

Our surface mounted bottle filler range provides your students with access to fill their water bottles with clean, refrigerated or non-refrigerated drinking water.

These surface mounted units come in a range of different options depending on your school requirements and are a great option for installing in existing buildings.

Several configurations are available including contactless, hands-free dispensing options.

Wall-recessed options

Our wall-recessed options include bottle filler only models, as well as our all-in-one hydration station combos.

These units are recessed into the wall, providing a stylish solution to meet your requirements.

Available in designs including dual level, vandal-resistant, auto dispensing water fountains, and with or without integrated basins with a bubbler.

Optional filtration for taste, odour and chlorine reduction, plus access to UV Quasar LED technology, ensures your students always have access to clean, fresh, cold water.

Water Troughs

Does yours need a refresh?

For decades, Australian schools have relied on public drinking troughs to assist with keeping their students hydrated throughout the day, with it being common for students to be found lining up to get water before heading off to class.

Aqua Cooler offers a drinking trough which has been designed specifically to offer the benefits of enhanced hygiene and safety. The **PWD** drinking trough comes with a range of different fixtures that enable you to choose how you want your students to interact with this system, including standard bubbler fixtures and bottle refill points.

BF200WM Wall Mounted Bottle Refiller

Designed to fit above drinking troughs, these units come with up to 4 separate drink bottle refill taps.

With sleek, easy-to-clean designs, these Australian made stainless steel refill stations are perfect for both indoor and outdoor areas, providing your students with everything they need to keep hydrated no matter the weather.

These units can be mounted over existing troughs or paired with a new PWD trough from our range.

Chill your existing trough!

Over the years, there have been many advancements to classic bubbler systems, allowing for more hygienic and safe ways to access to clean drinking water. One of these advancements is the **PT30**, a remote storage tank that can be easily added to your existing drinking trough systems.

- Provides clean, chilled water for up to 6 bubbler taps.
- Perfect for schools or anywhere needing high volumes of chilled water.
- The combination of high-litre-per-hour cooling and a large 120L storage tank makes these coolers ideal for high-capacity uses, like lunch time breaks and sporting events.
- Has the option to add a water filter to the unit allowing all your students to have access to not only chilled, but filtered water.

Free-standing Units

Heavy-duty SU600 series drinking fountain

Outdoor areas in school yards aren't complete without drinking fountains and bottles fillers to help quench the thirst of your students during the long hot days of summer.

For Australian students, playing in the sun throughout the day isn't anything new, and is often encouraged, and it's because of this that it is essential to have drinking bubblers near high traffic areas, such as ovals and basketball courts.

The **SU600** and **SU650** are perfect for any outdoor situations and are designed to be sturdy and resilient whilst dispensing clean, crisp water.

Both SU600 and SU650 units are Australian-made and fully WaterMark approved. The SU650 offers an additional bottle refill station, allowing for on-the-go hydration.

SU650 with Remote Chiller

Access to fresh drinking water is important for your students, however, during summer (when staying hydrated is even more crucial) students can tend to avoid some sources of hydration due to the taste or temperature of the water. To combat this, Aqua Cooler offers a series of remote water chillers and filtration systems that can be retrofitted to your existing ambient fountains or bubblers, to offer conveniently chilled water for every season.

There are three models available to suit different chilling capacity requirements. The **Sonata** unit, constructed with heavy-duty galvanized steel, is built to handle any conditions while also cooling water down to a crisp 10°C.

M-Series

Indoor and Outdoor Options

While making sure your students are well hydrated is extremely important, so is hydrating your staff! Therefore, it is recommended that every school faculty room is equipped with a reliable, consistent source of cool drinking water. Aqua Cooler's **M-series** will make sure those needs are met with its versatile and robust design.

This unit comes with both an adjustable, tamper-proof, non-squirt bubbler and a convenient glass filler to cater for any need. While the easy-to-replace filter removes any unwanted odour, taste and chlorine from the drinking water. Available in a dark-grey powdercoat or a stainless steel finish, this unit will provide your staff and students with some of the purest water available.

Also available as a half size wall mounted **WM model**.

Water Coolers

Odyssey Series

The **Odyssey Series** is a free-standing water cooler, suitable for use with 15L standard spring water bottles or our tri-stage filtered refillable bottle which filters your own tap water. Odyssey units are available in ambient and cold configurations, and with a 2.5L storage tank and chilling capacity of 2.5L of cold water per hour, they are ideal for staff rooms.

Odyssey coolers are created from high-quality materials including food-grade and stainless-steel water contact tubes. The durable plastic, coupled with steel side panels for strength, makes them a high quality cooler fit for any office application. The Odyssey Series is covered with a 12-month standard, and additional 24-month refrigeration system warranty.

Maximus Series

Maximus is the largest capacity commercial water cooler available on the Australian market. No other cooler in its class offers the same level of performance, making Maximus the ideal choice for high-demand areas such as offices and workshops. Simply connecting to your mains plumbing, Maximus has an auto top up feature which ensures you have chilled water on demand.

Coupled with our 12-month standard warranty, additional 24-month refrigeration circuit warranty and full range of replacement parts, the Maximus is the powerhouse of water coolers.

Under Sink Chilling System

Aqua Cooler **Under Bench Chillers** sit out of sight to deliver a steady supply of chilled water to a tap or faucet above the bench. Under bench units are a great alternative to keeping jugs of water in the fridge and, with an optional filter, can provide chilled and filtered water on demand at any time.

- 5L/Hour chilled water output
- Stylish lever tap for dispensing water
- Specifically designed for space-saving with under-bench installation
- 12 month standard warranty plus additional 24 months refrigeration system coverage.
